DETAILED ACTION

Allowable Subject Matter

1. Claims 1-69 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claims 1, 24, and 47, prior art fails to disclose or make obvious, in combination with other recited features of the claim limitations, a system and method for analyzing a sample, comprising: a liquid chromatograph into which the sample is input for chromatographic separation; a mass spectrometer that receives the output of the liquid chromatograph and outputs a plurality of spectra of the sample at discrete times; a computer coupled to the mass spectrometer wherein the computer receives the plurality of spectra and stores them in a two-dimensional data matrix; a two-dimensional filter; wherein the computer applies the two-dimensional filter to the data matrix to generate an output data matrix and examines the output data matrix to detect ions in the sample by identifying one or more peaks in the output data matrix.

The key element of the applicant's invention, not disclosed in prior art but present in all the independent claims, is that the computer receives the plurality of mass spectra and stores them in a two-dimensional data matrix; wherein the computer applies a two-dimensional filter to the data matrix to generate an output data matrix and examines the output data matrix to detect ions in the sample by identifying one or more peaks in the output data matrix.

The dependent claims 2-23, 25-46, and 48-69, are allowable by virtue of their dependence upon the independent claims 1, 24, and 47, respectively.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thompson et al. (2004/0181351 A1) disclose methods and devices for identifying related ions from chromatographic mass spectral datasets containing overlapping components. Plumb et al. (7,418,352 B2) disclose a method of analyzing three-dimensional data obtained from a chromatography/spectrometry process using two-dimensional, multi-variant, statistical analysis. Nicholson et al. (7,373,256 B2) disclose a method for the identification of molecules and biomarkers using chemical, biochemical, and biological data.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nikita Wells whose telephone number is (571) 272-2484. The examiner can normally be reached on 8:30 AM - 5:00 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The central fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.
6. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
